

## Canine Pancreatic Lipase Test Kit

For veterinary use only.

English version 

### Canine SNAP® cPL\*

In vitro test for the determination of pancreas-specific lipase levels in canine serum.

#### Precautions and warnings

- All wastes should be properly decontaminated prior to disposal.
- Do not mix components from kits with different lot numbers.
- Do not use a SNAP device that has been activated prior to the addition of sample.
- Refer to country specific Material Safety Data Sheet for regional hazard identification.

#### Storage

- Store at 2-8°C until expiration date.

#### Kit components

Item	Reagents	Quantity
1	1 bottle of anti-chicken:HRPO/anti-cPL: HRPO conjugate	4.0 mL
2	SNAP device	5, 10 or 15

Each SNAP device contains 0.4 mL of wash solution and 0.6 mL of substrate solution.

Other components: transfer pipettes, sample tubes, and reagent rack

Conjugate - H317/P620/H421/P261/P280/P305+P313: May cause an allergic skin reaction. Harmful to aquatic life. Harmful to aquatic life with long lasting effects. Avoid breathing mist/vapors. Wear protective gloves. If skin irritation or rash occurs: Get medical advice/attention.

Substrate Solution - H317/P621/P260/P302+P303/P333+P313: May cause an allergic skin reaction. May cause eye irritation. Avoid breathing mist/vapors. Wear protective face protection. Wear protective gloves. If IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists. Get medical advice/attention.

If skin irritation or rash occurs: Get medical advice/attention.

WARNING! Wash hands thoroughly after handling. Avoid contact with eyes. If eye contact occurs: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If irritation persists. Get medical advice/attention.

If skin irritation or rash occurs: Get medical advice/attention.

ATTENTION! Substrate - H317/P621/P260/P302+P303/P333+P313: Pesticide. May cause an allergic skin reaction. Causes serious eye irritation. Avoid breathing mist/vapors. Wear protective gloves. Protect from children. If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists. Get medical advice/attention.

If skin irritation or rash occurs: Get medical advice/attention.

Information for use:

Samples must be at room temperature (18-25°C) before beginning the test procedure.

• Samples either fresh or stored at 2-8°C for up to one week, can be used.

• For longer storage, serum can be frozen (-20°C or colder) and then reconstituted before use.

• Hemolyzed, icteric or lipemic samples will not affect test results.

#### Test procedure

- Allow all components to equilibrate at room temperature (18-25°C) for at least 30 minutes. **Do not heat.**

2. Using the pipette provided, dispense 3 drops of sample into a new sample tube.

3. Holding the bottle vertically, add 4 drops of conjugate to the sample tube.

4. Cap the sample tube and mix thoroughly by inverting it 3-5 times.

5. Place the device on a horizontal surface. Add the entire contents of the sample tube to the sample well, being careful not to splash the contents outside the sample well.

The sample will flow across the result window, reaching the activation circle in 30-60 seconds. Some sample may remain in the sample well.

6. When color FIRST appears in the activation circle, push the activator firmly until it is flush with the device body.

NOTE: Some samples may not flow to the activation circle within 60 seconds. In this case, press the activator after the sample has flowed across the result window.

7. Read test result 10 minutes from the time of activation.

#### Interpreting the test results

Reference Spot → Sample Spot

Abnormal level  
If the color intensity of the sample spot is equal to or darker than the color intensity of the reference spot, cPL levels are abnormal.

Normal level  
If the color intensity of the sample spot is lighter than the color intensity of the reference spot, cPL levels are normal.

NOTE: It is possible for no color to develop on the sample spot.

#### Invalid results

• Background – If the sample is allowed to flow past the activation circle, background color may result. Some background color is normal.

However, if colored background obscures test result, repeat the test.

• No color development – If reference spot does not develop color, repeat the test.

#### IDEXX SNAPshot Dx™ Analyzer

Test results can also be read using the SNAPshot Dx analyzer. A complete description of how to enter patient data and read test results using the SNAPshot Dx analyzer can be found in the SNAPshot Dx analyzer user guide.

#### Repeatability (qualitative precision)

Repeatability studies were conducted by running multiple replicates of five canine serum pools on SNAP cPL devices. The canine pancreatic lipase (cPL) concentrations in each pool were determined using the Spec cPL assay.

SNAP cPL devices were run and visually interpreted by a single operator and results were tabulated as either N (Normal) or A (Abnormal). Within-Day and Day-to-Day repeatability were determined by running N=10 replicates per pool over three days.

The results of this study are guidelines.

cPL concentration (µg/L) as determined by Spec cPL	SNAP cPL repeatability
52	N 10/10 N 10/10 N 10/10 N 10/10 N 10/10 N
120	N 10/10 N 10/10 N 10/10 N 30/30 N
337	A 10/10 A 10/10 A 9/10 A 29/30 A
561	A 10/10 A 10/10 A 10/10 A 30/30 A
1000	A 10/10 A 10/10 A 10/10 A 10/10 A 30/30 A

#### Agreement with Spec cPL® reference method

A user group study was conducted to evaluate agreement between SNAP cPL visual results and Spec cPL quantitative results.

#### Study design

- Twenty canine serum samples with known Spec cPL concentrations were assayed on SNAP cPL devices.
- Each device was visually interpreted twice by each of 14 veterinary professionals for a total of 28 observations per sample. (Total n=560)
- Veterinary professionals were blinded as to the Spec cPL concentrations of the samples.

#### Results:

96% (538) of the interpretations were correct.

#### Statistical significance:

With 95% confidence, there is 94.0-97.4% agreement between the SNAP cPL and Spec cPL methods.

Concordance with the method of reference Spec cPL\*

One study was realized on three groups of utilizers for evaluate the concordance entre les résultats visuels de SNAP cPL et les résultats quantitatifs de Spec cPL.

Plan d'étude:

- Vingt échantillons de sérum canin aux concentrations Spec cPL connues ont été analysés à l'aide des dispositifs SNAP cPL.
- Chaque dispositif a été interprété visuellement à deux reprises par chacun des 14 professionnels vétérinaires, soit un total de 28 observations par échantillon. (Total n = 560).
- Tous les professionnels vétérinaires ne connaissaient pas les concentrations des échantillons du Spec cPL.

Réultats:

96% (538) des interprétations étaient correctes.

#### Signification statistique:

La concordance entre les méthodes SNAP cPL et Spec cPL est de 94% et 97.4% avec une indice de confiance à 95%.

## Trousse de détection de la lipase pancréatique canine

Réservez à l'usage vétérinaire.

English version 

### Canine SNAP® cPL\*

Test in vitro pour déterminer la sécrétion spécifique de la lipase pancréatique chez le chien.

#### Précautions d'emploi et mises en garde

- Assurer la déscontamination totale des déchets avant d'en disposer.
- Ne pas mélanger les composants de la trousse ayant différents numéros de lot.
- Ne pas utiliser de dispositif SNAP ayant été activé avant l'ajout de l'échantillon.
- Se référer à la fiche de données de sécurité spécifique au pays pour identifier les dangers régionaux.

#### Conservation

- Conserver à 2-8°C jusqu'à la date de péremption.

#### Kit components

Item	Reagents	Quantity
1	1 bottle of anti-chicken:HRPO/anti-cPL: HRPO conjugate	4.0 mL
2	SNAP device	5, 10 or 15

Chaque dispositif SNAP contient 0.4 mL de solution de lavage et 0.6 mL de solution de substrat.

Autres composants: pipettes de transfert, tubes et réactif rack

Conjugat - H317/P620/H421/P261/P280/P303+P313: Peut provoquer une réaction allergique cutanée. Nocif pour les organismes aquatiques. Nocif pour les organismes aquatiques, avec effets néfastes à long terme. Éviter de respirer les brouillards/vapeurs. Porter des gants de protection. En cas d'irritation ou d'éruption cutanée: consulter un médecin.
